

# **IIIT Raichur Lost & Found: Reclaim What You've Lost**

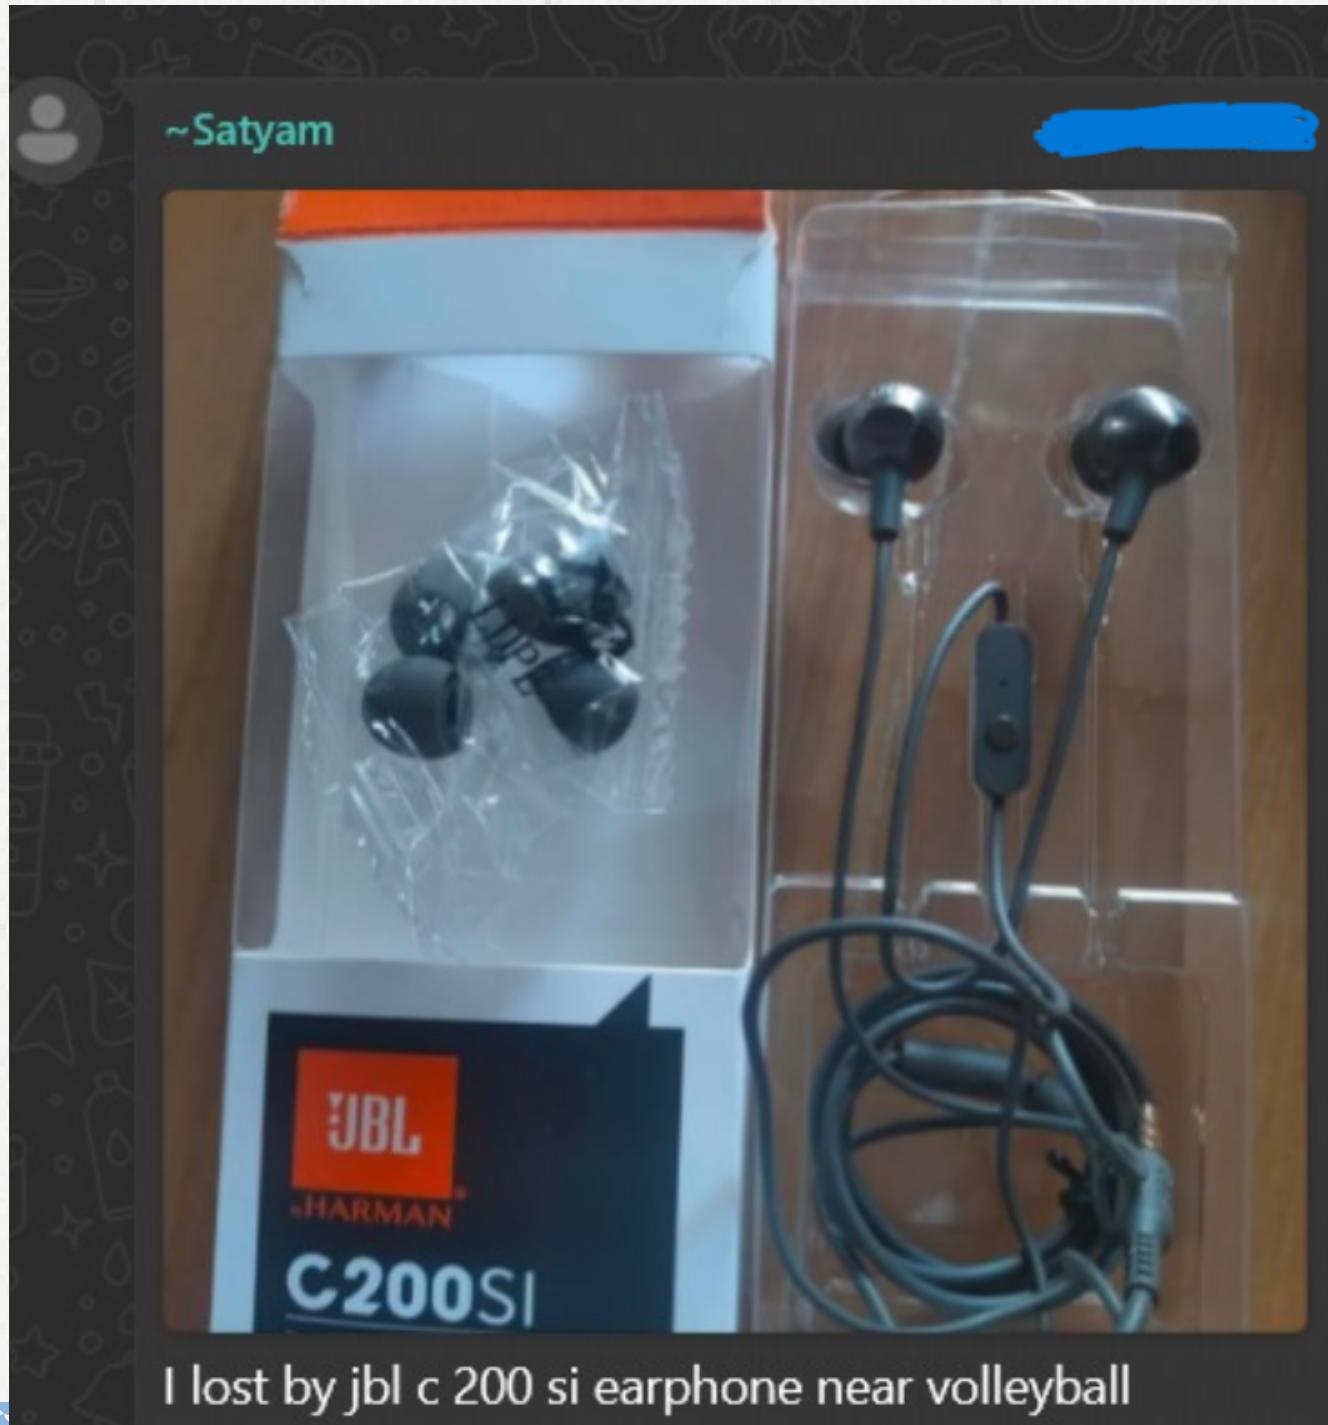

**Presented by Nikunj Sharma**

# AIM

The primary aim of your project is to develop a web-based Lost & Found system specifically for the IIIT Raichur community. This system aims to replace the current, less efficient, method of relying on a WhatsApp group for managing lost and found items.

## ON WHATSAPP

## ON WEBSITE

Item Name: MI Note 11

Description :Last time it was with me when i was playing basketball

FOUND

# Project vision and mission

01. Develop a user-friendly platform
02. Increase item visibility
03. Enhance security

# Creation process

## LEARNING

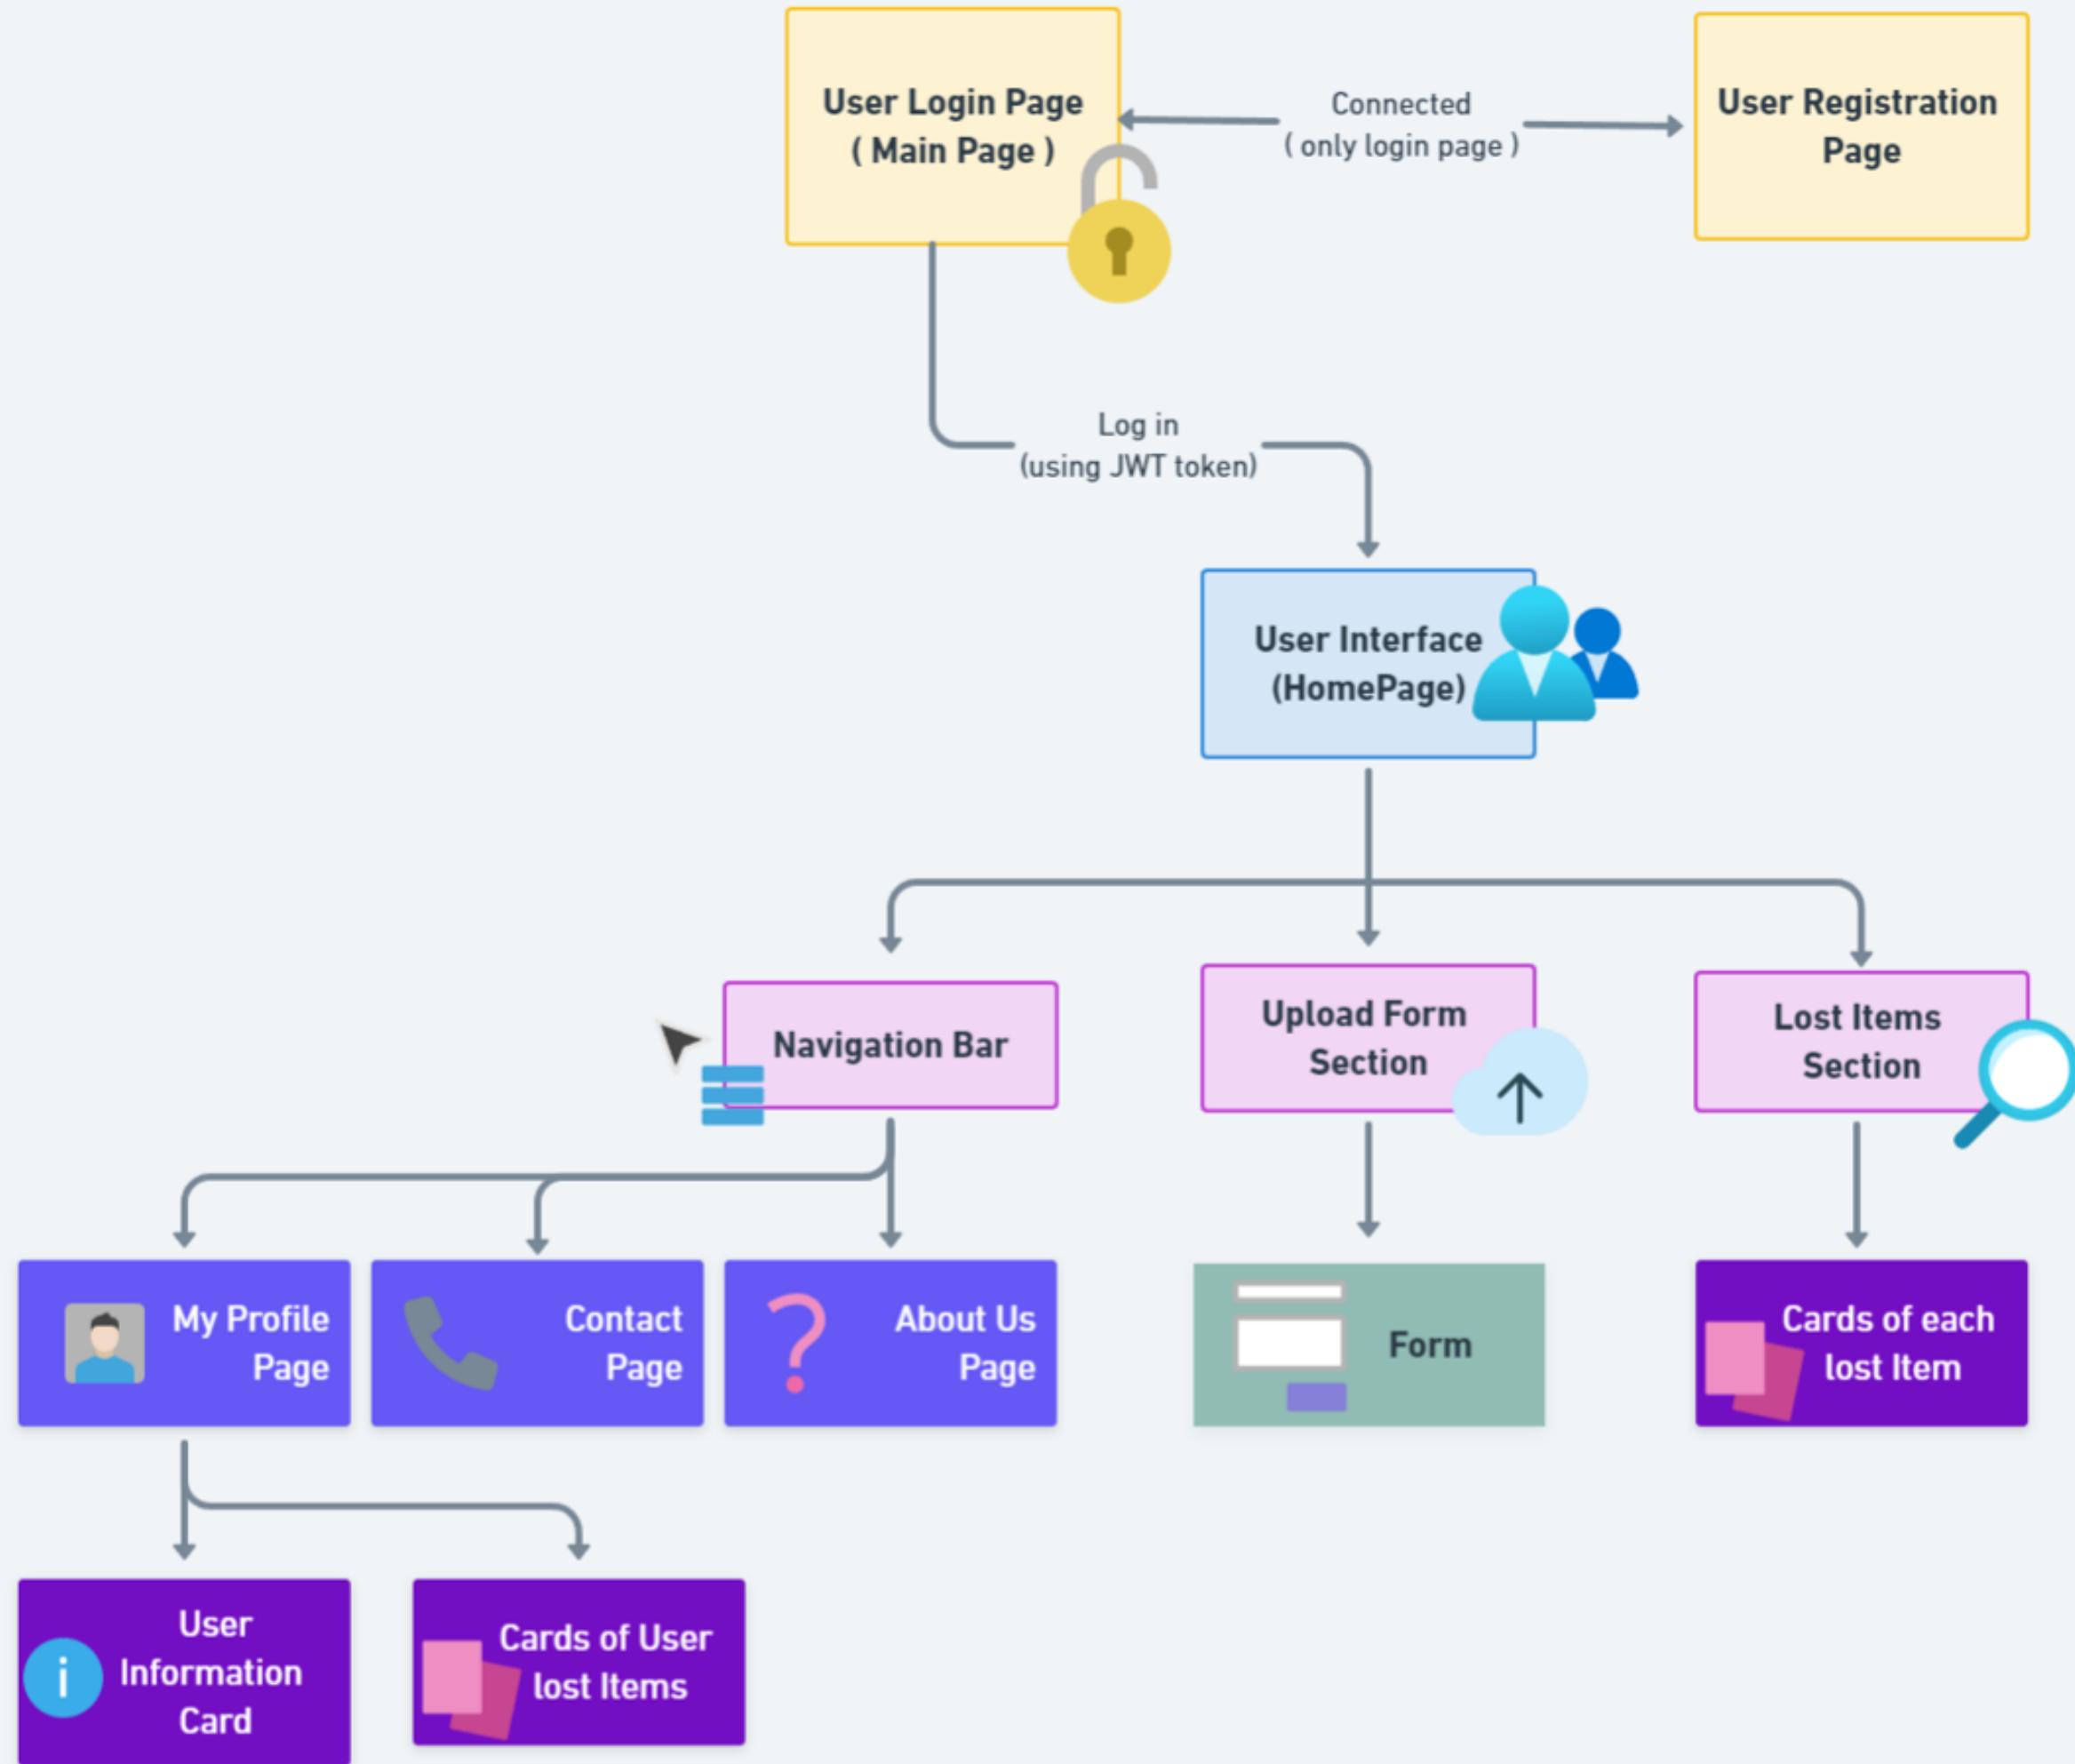

- Starting with HTML,CSS,JAVASCRIPT for client side then for serve side node & express.js and implementing them with database.
- After that about different framework like multer,jwt etc

# Creation process

## IMPLEMENTATION

- Started with basic image uploader using multer.
- After that designed each page of website with hbs,css and client side js.
- Connected each page with backend and applied authentication.

# **DEMO OF WEBSITE**

# Final reflections and future steps

- Currently the lost items of someone can be uploaded not the items found inside the campus and we don't know who this belongs to.
- Browsing Lost Items
- Claiming Ownership (Secure Verification)
- Email Notifications
- Include Media Queries:

**Thank you  
very much!**
